

**2302**

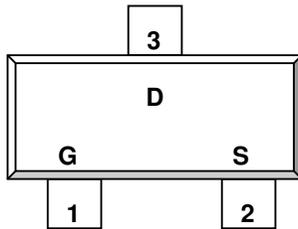

N Channel Enhancement Mode MOSFET

**3.6A**

**DESCRIPTION**

2302 is the N-Channel logic enhancement mode power field effect transistor which is produced using high cell density, DMOS trench technology. This high density process is especially tailored to minimize on-state resistance. These devices are particularly suited for low voltage application such as cellular phone and notebook computer power management, other battery powered circuits, and low in-line power loss are required. The product is in a very small outline surface mount package.

**PIN CONFIGURATION  
SOT-23**

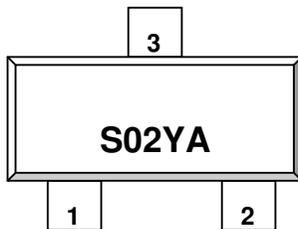

1.Gate 2.Source 3.Drain

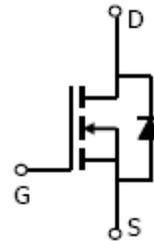

**FEATURE**

- 20V/3.6A,  $R_{DS(ON)} = 70m\Omega$   
@VGS = 4.5V
- 20V/3.1A,  $R_{DS(ON)} = 95 m\Omega$   
@VGS = 2.5V
- Super high density cell design for extremely low  $R_{DS(ON)}$
- Exceptional on-resistance and maximum DC current capability
- SOT-23 package design

**PART MARKING  
SOT-23**

Y: Year Code A: Process Code

**ORDERING INFORMATION**

Part Number	Package	Part Marking
2302	SOT-23	S02YA
